

Torque Tool Manager Software

Torque Tool Manager (TTM) is calibration and certification software specifically engineered to work with your System 4/5, System 6, PTM-D, or Torq-Tronics Digital Torque Testers!

TTM software will fulfill your ISO and QS 9000 calibration and certification requirements far more cost-effectively than manual record keeping systems!

- Choose from standard calibration routines or customize your own to assure proper test procedures and accuracy - every time! TTM is flexible; it accommodates the full range of manual and power torque tools.
- TTM error-proofs calibration procedures and virtually eliminates retesting due to operator error! TTM downloads the proper test protocol to your S/R tester and sets the tester up for the tool. It will only accept results that are in line with the test protocol, so errors resulting from failure to follow the programmed procedure are automatically rejected.
- TTM keeps records for each tool, including calibration date, serial number, tester and transducer serial numbers, operator, "As Found" and "As Left" test results, NIST traceability numbers, and all other data required for ISO and QS compliance!

For more information on TTM, contact Customer Service via phone, fax, or e-mail!
